PROFILE

I treat AI systems as unreliable narrators, proven through public GitHub projects (UI, API, performance, data, AI validation, multi-agent adversarial). Blend manual, automation, compliance, and AI quality. ICT Systems Test Engineer (ACS 263213) & QA Engineer (ACS 263211) with 3+ years in Australia's regulated gaming/wagering industry. Seeking QA Engineer, Systems Test Engineer, AI Test Engineer, or SDET roles.

TECHNICAL SKILLS

- **Test automation:** Playwright (Python), Pytest, POM, parallel, xdist, Allure, HTML reports
- **API & backend:** Requests, JSON Schema, contract validation, negative testing
- **Performance:** Locust, 95th percentile, SLA thresholds, CI integration
- **AI quality:** LLM-as-Judge, multi-agent adversarial (Doer/Adversary/Judge), prompt injection, hallucination detection, mock MCP
- **Data & E2E:** MongoDB, data seeding, service container, end-to-end validation
- **CI/CD & tools:** GitHub Actions, Docker, JIRA, Confluence, Postman, Agile/Scrum
- **Compliance:** Australian gaming/wagering standards, certification reporting, defect tracking

WORK EXPERIENCE

QA Test Analyst / Senior Test Engineer / Project Lead

iTech Labs (GLI Subsidiary) & Gaming Labs International, Australia – Nov 2021 to Aug 2025

- Designed/executed 50+ structured system test plans for online gaming/wagering platforms 100% alignment with global regulations in different jurisdictions.
- Delivered functional, regression, compliance testing and improved defect detection by 30%.
- Interpreted regulatory frameworks to define test scope and increased coverage completeness by 25%.
- Managed end-to-end certification projects across global teams; logged/analysed defects (JIRA).
- Produced certification reports for clients/regulators; introduced templates that reduced manual errors.

PUBLIC GITHUB PROJECTS [GitHub Portfolio](#)

1. Playwright Python framework (POM, parallel, Docker)
2. API test suite (schema validation, CRUD, negative tests)
3. Locust performance suite (p95/SLA, Docker, CI)
4. MongoDB + Playwright data validation (seed, UI, DB assertions)
5. AI Agent Validation (LLM-as-Judge, hallucination detection, mock MCP)
6. AI Agent Quality Sandbox (multi-agent adversarial: Doer/Adversary/Judge, prompt injection)

EDUCATION

Master of Electrical Engineering with Business (Research) University of Melbourne – Feb 2017 to Jan 2021

- Programming, control systems, software development fundamentals.
